Newly Renovated Home with Solid Carbonised Strand Woven Click Bamboo Flooring in the Lounge.

Joe has been renovating his house room by room and wanted a new floor for his lounge area. The room in question already had a wood burner so Joe knew that a carpet would get too messy and be difficult to keep clean. A wooden or bamboo floor were options he wanted to explore. Joe was originally looking at Oak flooring but found that it was quite a bit more expensive than bamboo. After researching bamboo flooring, he felt that "they look fantastic, are quite hard wearing and are available in 10mm thicknesses." Joe needed thinner planks of flooring to fit in with the existing hearth of the log burner. Strand woven bamboo is great for rooms with changes in temperature, like rooms with a wood burner. It is stable enough to adapt to its surroundings.

The floor that Joe chose was Solid Carbonised Strand Woven Click Bamboo Flooring. The medium brown colour of this particular floor looks great

against the brilliant white skirting boards in this modern style lounge. Joe is really happy with his bamboo floor and found that the service was excellent. "I didn't expect the flooring to be delivered the very next morning after I ordered it."

"I'm very happy with The Bamboo Flooring I chose, the natural variations in grain and colour are gorgeous and have made such a difference to the room. It even smells nice! The flooring click system is straight forward and speedy to fit. I would definitely recommend The Bamboo Flooring Company to anyone who wants a quality hardwood floor without the oak flooring price tag."
